# 1. ProfDog Browser

Here's the obligatory screenshot.

ProfDog Browser

The screenshot shows the ProfDog Browser interface with several key components:

- Sessions Table:** A table with columns: name:port/owner, status, outermost, innermost, directory, oldest. A yellow callout box states: "collates incoming events into discrete callstacks (per initiator)".
- Session Output:** A list of session names. A yellow callout box states: "the callstack for each interaction is written out as XML".
- Breakdown:** A pie chart showing time distribution by category. A yellow callout box states: "timings are summarised by category".
- Callstack Table:** A table showing method calls with columns: total, self, category. A yellow callout box states: "a callstack is a nested set of timed scopes".
- Log Messages:** A table with columns: logger, message, level, timestamp. A yellow callout box states: "any (non-scoping) log messages are also displayed".
